IN presenting our new illustrated catalogue, in addition to a complete list of all goods continually carried in stock, we show details and dimensions of stock window frames for wood, plaster, and brick buildings; suggestive designs for odd and fancy windows and sash; also designs for special glass and solid panel doors. As new goods are added, new sheets will be sent to be inserted.

In Section E we give a list of heights of short doors, made by cutting one or more panels and rails from stock five cross panel doors. This will be found of value in many cases where short doors are required, thus saving the necessity of having them made to order.

We wish to call special attention to the quality of our stock. Our goods are all graded according to the highest standards. All windows, sash, and blinds are Eastern made, mortised, tenoned, and wood pinned, and are of full thickness; $1\frac{1}{2}$ -inch windows and sash measure full $1\frac{1}{2}$ inches and not $1\frac{3}{8}$ inches. All blinds are Eastern made, mortised, tenoned, and wood pinned, and are full $1\frac{1}{4}$ inches in thickness.

We suggest that in ordering odd or fancy windows that stock dimensions be followed as far as possible, for, in doing so, stock frames, blinds, and storm windows may be used at a considerable saving in cost over odd sizes.

LOUDEN DOORS AND HANGERS

ESTIMATING DEPARTMENT

We make a specialty of furnishing under contract, windows, frames, blinds, and doors, and are glad at any time to send a competent man to estimate on any work of this nature.

SUGGESTIONS FOR ORDERING

When ordering, please remember that to get the goods you desire your order must be explicit.

WINDOW FRAMES

Orders for window frames should state size of glass or size of window, thickness of same, thickness of parting bead (all stock frames have $\frac{3}{8}$ -inch parting bead), width of jambs, whether frames are for wood or brick building and whether in shook or nailed up. If special or detail frames are required, send full-size drawing. If pulleys better than those carried in stock are required, specify what is desired.

BLINDS

Orders for blinds should state size of glass and number of lights in windows to be covered, or outside dimensions of blinds (stock blinds are same width as windows, $\frac{1}{2}$ inch longer for wood buildings and 2 inches longer for brick buildings). State if slats are to be half roll or stationary, whether No. 1 or No. 2 quality, whether for wood or brick building, and whether pairs, single, or four-fold blinds are required.

DOOR FRAMES

Orders for door frames should state size and thickness of doors, width and thickness of jambs, and kind of wood. (Casings or architraves are not included with door frames.)

WINDOWS

Orders for windows should state number of lights or design number (see Section B), thickness of window, thickness of lip (all stock windows have $\frac{3}{8}$ -inch lips), kind and quality of glass required, whether to be stained, oiled, or primed. "Window" means two pieces to fill opening. "Sash" means one piece to fill opening.

DOORS

All orders for doors should state size, thickness, and kind of wood, style of moulding required, whether to have wood or glass panels. If special doors are required, details should be sent with order.

WEIGHTS AND CORD

It will be found advantageous to have weights and cord furnished with all windows ordered, in which case we send correct weights for each. If special cord is required, state size and kind. Owing to the variation in thickness of glass, weights as listed with windows will vary somewhat, but are averaged as accurately as possible.

SPECIAL AND DETAIL WORK

Orders for special and detailed frames, blinds, windows, or doors should be accompanied by full-size working drawings and specifications.

Detail of stock window frame for wood buildings.
 Jambs $5\frac{5}{8}"$ to set on boarding.
 See list of stock sizes next page.

WINDOW FRAMES

With hard pine jambs $5\frac{5}{8}$ " wide, to set on boarding.
 With pockets and pulleys (for $1\frac{1}{2}$ " sash), $\frac{3}{8}$ " parting beads.

Send for special Loudden
Catalogue.

Carried in stock this style

ADVANTAGES OF THE LOUDEN HANGER

The accompanying sketches, in which the various types of garage doors are compared, illustrate more convincingly than any written description the exclusive advantages of the Loudenhung door.

No other door takes up so little room in the building. It is as completely out of the way as the cover of a roll-top desk. It hugs the corner closely and lies flat against the wall when open. You don't have to shift gears and shave corners when you put up your car. Fenders and lamps are not in danger of swinging doors or a miscalculation of a tight squeeze.

SECTIONS OF AUSTRAL WINDOW

Hang your Storm Windows with MERRILL'S VENTILATING STORM WINDOW FASTENER

(Patented October 31, 1911)

ADVANTAGES

Sash easily and quickly put on and taken off.

Can be used without removing screen guides.

Admits of ventilating any room at any time.

When closed the window is air-tight.

All parts are made of galvanized steel and will not break or rust.

No screws to remove and no ladder needed to hang sash.
